Technical Skills

Strong: JavaScript, React, Redux, ES6, Node.js, Angular, Express.js, SQL, MongoDB, PostgreSQL, Authentication

Experienced: jQuery, CSS, Backbone, Socket.io, Ruby on Rails, Heroku, Digital Ocean, Backbone, D3

Software Engineering Applications

DayVoyage.com, *Software Engineer*

<https://www.dayvoyage.com>

Create and share itineraries with friends or with the DayVoyage community.

- Designed schemas and built API database service to interface with the data layer within application
- Created schema models and relationships with PostgreSQL using Nodal, which is an in-beta service API
- Views composed of React components, with application states managed by a flux architecture with Redux
- Structured server side routes with node style callbacks with asynchronous actions to promote maintainability

iOS Morning Routine, *Software Engineer*

Daily morning routine tracker and commute manager

- Created the front end using React Native and ES6 for smooth transition between components and views
- Modeled database schemas and utilized authentication from Firebase DB for quick read and write access
- Deployed on iOS using Bitrise.io for constant testing with each major pull request iteration

Codify, *Software Engineer, Product Owner*

<http://107.170.10.76/>

Community for students seeking guidance from experienced programming tutors

- Deployed and refactored a MEAN stack codebase to allow cross browser communications with external APIs
- Built geolocation-based search functionality by integrating Google Maps API to calculate distance from user
- Combined CodeMirror in-browser text editor and Socket.io events for private real-time code sharing sessions

Lighthouse, *Software Engineer*

Social network for coordinating events and tracking location with your friends in real-time

- Produced a React Native iOS application that implements native iOS components for a smooth user experience.
- Wrote user schemas on Firebase DB to efficiently create user search, relationships and groups
- Integrated Socket.io events into MapBox to simultaneously track multiple users locations at once.

FitPlanner, *Software Engineer*

<http://stran-fitplanner.herokuapp.com/>

Tool for maintaining a fitness schedule and finding new related exercises from a seeded database, built in Ruby on Rails

- Configured a relational database for users' favorite exercises and user-created exercises
- Implemented search functionality on exercises and user created exercises tables through SQL queries

Work Experience

Hired, Inc., *Paid User Acquisition Manager*

2015-2016

- Implemented new marketing initiatives through Google, Facebook, and LinkedIn Ads API and platforms
- Worked closely with teams for Google AdWords beta products to develop and refine glaring bugs and issues

One Kings Lane, *Internet Marketing Manager*

2013-2015

- Worked with integrating recommendation product feed into Google AdWords and Facebook Ads AP.
- Improved ROI efficiency of product feed marketing through Google, Social Media, and third party advertisers

Sharethrough, *Campaign Coordinator*

2012-2013

Education

Hack Reactor, *Advanced Software Engineering Immersive Program*

2016

General Assembly, *Back-End Web Development - Ruby on Rails*

2015

University of Washington, B.A. in *Business Administration - Marketing*

2010
